Jun 06, 2020 · At the farthest end, since color affects people's mental health, there's a growing trend of color therapy to help with mood. Some of effects of color psychology are even baked into the way we talk about colors. In color theory, we designate colors in a lot of different ways. One of the most basic distinctions is between warm colors and cool colors.

A color model is an abstract mathematical model describing the way colors can be represented as tuples of numbers, typically as three or four values or color components. When this model is associated with a precise description of how the components are to be interpreted (viewing conditions, etc.), the resulting set of colors is called "color space."

[Emotion classification - Wikipedia](#)

Skin changes color usually because something is going on in the body. For example, a person may look yellow because of liver problems, slightly blue because of breathing problems, bruised because of blood disorders, or pink or red because of skin problems or extra sensitivity to sunlight.
