Guiding Reading will help all teachers of children in Key Stage 2 understand what is involved in guided reading and will dispel common misunderstandings. In guided reading, children read the texts themselves while the teacher acts as the expert who guides them through the text. This book explains the development of reading processes and preferences in children aged 7 to 11, and gives the rationale for guided reading. It explains clearly what teachers need to do in order to organise their classrooms, their resources and themselves in order to carry out guided reading successfully. The book also provides exemplar lessons – at least four for each year group – that show guided reading in action. Annotated booklists help teachers select the texts that will match their pupils' reading skills and interests. In all, over 400 picture books, short and longer fiction, non-fiction, poetry and other media titles are listed. A section on continuing professional development contains five INSET sessions that will enable the whole school staff to become proficient at using guided reading. The second edition of Guiding Reading has been thoroughly revised and expanded. It is a helpful complement to two further books on guided reading published by the Institute of Education: Book Bands for Guided Reading and Bridging Bands for Guided Reading (which covers the transition from KS1 to KS2). This is an essential handbook for all literacy co-ordinators and an invaluable resource for newly qualified teachers and class teachers.

The Cambridge Primary Review Research Surveys is the outcome of the Cambridge Primary Review – England's biggest enquiry into primary education for over forty years. Fully independent of government, it was launched in 2006 to investigate the condition and future of primary education at a time of change and uncertainty and after two decades of almost uninterrupted reform. Ranging over ten broad themes and drawing on a vast array of evidence, the Review published thirty-one interim reports, including twenty-eight surveys of published research, provoking media headlines and public debate, before presenting its final report and recommendations. This book brings together the twenty-eight research surveys, specially commissioned from sixty-five leading academics in the areas under scrutiny and now revised and updated, to create what is probably the most comprehensive overview and evaluation of research in primary education yet published. A particular feature is the prominence given to international and comparative perspectives. With an introduction from Robin Alexander, the Review's director, the book is divided into eight sections, covering: children's lives and voices; school, home and community children's development, learning, diversity and needs aims, values and contexts for primary education the structure and content of primary education outcomes, standards and assessment in primary education teaching in primary schools: structures and processes teaching in primary schools: training, development and workforce reform policy frameworks: governance, funding, reform and quality assurance. The Cambridge Primary Review Research Surveys is an essential reference tool for professionals, researchers, students and policy-makers working in the fields of early years, primary and secondary education.
