outputs is less than inputs, it is a Priority encoder $V=1$ when input is valid and for priority encoder it checks first high bit encountered. Except all are having at least one bit high and 'x' represents the "don't care" as we have found a high bit already.

OBE DEC-2020 : ARCHIVE OF QUESTION PAPERS – St. Stephen's ... Logic gates are an important concept if you are studying electronics. These are important digital devices that are mainly based on the Boolean function. Logic gates are used to carry out logical operations on single or multiple binary inputs and give one binary output. In simple terms, logic gates are the electronic circuits in a digital system.

Latest Posts - FirstRanker.com :: FirstRanker's Choice Class 10 CBSE Last 10 Year Question Paper Subject - Wise Marks Weightage.
