As the array of expertise required to be a successful leader in the U.S. Navy has become more complex, Navy leaders have become increasingly concerned that senior officers need additional kinds of expertise, beyond those traditionally developed in naval officers, to be successful in commanding, leading, and managing the Navy enterprise. This study explores whether there is a gap in officer development that manifests itself in the flag officer ranks. Through surveys and interviews, and working with the Navy's Office of the Executive Learning Officer (ELO), the authors examined the kinds of expertise required for successful performance in Navy flag billets. They then created a model to determine the kinds of experience that the pool of Rear Admiral officers must have to fill these requirements, and compared it to actual experience possessed by several years of Rear Admiral selectees. The authors did not find major gaps between the kinds of experience required for flag billets and those possessed by candidate officers, but they did identify several combinations of expertise that the Navy should work to develop in officers to better meet current requirements. Hanser et al. also examined the Navy's structure, force development, doctrine, and technology acquisitions to identify the types of expertise likely to become more important for Navy leadership in the future. The authors conclude with a variety of recommendations on how the Navy might better prepare officers for senior leadership roles.

This handbook implements AFD 36-22, Air Force Military Training. Information in this handbook is primarily from Air Force publications and contains a compilation of policies, procedures, and standards that guide Airmen's actions within the Profession of Arms. This handbook applies to the Regular Air Force, Air Force Reserve and Air National Guard. This handbook contains the basic information Airmen need to understand the professionalism required within the Profession of Arms. Attachment 1 contains references and supporting information used in this publication. This handbook is the sole source reference for the development of study guides to support the enlisted promotion system. Enlisted Airmen will use these study guide to prepare for their Promotion Fitness Examination (PFE) or United States Air Force Supervisory Examination (USAFSE).

and project management, and Test & Evaluation (T&E) personnel. It is written for current and potential acquisition management personnel and assumes some familiarity with basic terms, definitions, and processes as employed by the DoD acquisition process. The Test & Evaluation Management Guide is designed to assist Government and industry personnel in executing their management responsibilities relative to the T&E support of defense systems and facilitate learning during Defense Acquisition University coursework. The objective of a well-managed T&E program is to provide timely and accurate information to decision makers and program managers (PMs). The Test & Evaluation Management Guide was developed to assist the acquisition community in obtaining a better understanding of who the decision makers are and determining how and when to plan T&E events so that they are efficient and effective. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

Here is the extraordinary story of the most consequential campaign of the Pacific War- the U.S. Fifth Fleet's seizure of the Marianas, a relentless deployment of overwhelming force on air, land, and sea that opened the path to total victory over Japan and established a new state of the art in warfare- the first use of the forerunners of today's SEALs; the emergence of massive cross-hemispheric expeditionary operations; the flowering of American naval aviation and carrier power; and the secret training of Marianas-based air crews who would first unleash nuclear fire. From the epic seaborne invasion of Saipan, to the stunning aerial battles of the Marianas Turkey Shoot, to the grinding combat ashore and the devastating bombing campaign that culminated with Hiroshima and Nagasaki, the Marianas were the fulcrum of the Pacific, a kaleidoscope of valor, drama, and tragedy. Story Locale- The Marianas, Central Pacific, 1944.

Spearhead of Logistics is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.
