XML parsing in Python - GeeksforGeeks

Command Line Option. The `-Q` command line option takes a string argument that can take four values: `old`, `warn`, `warnall`, or `new`. The default is `old` in Python 2.2 but will change to `warn` in later 2.x versions. The `old` value means the classic division operator acts as described. The `warn` value means the classic division operator issues a warning (a `DeprecationWarning` using the ...
