The serious student of physics or engineering should try and dig up the 3 volume MIT physics series by French (Newtonian Mechanics, Vibrations, Special Relativity) and the 5 volume Berkeley Physics Course (BPC) to seek a deep and mathematically rigorous introduction to physics.

Theoretical framework Most systems are open systems, exchanging matter and energy with their respective surroundings; like a car, a coffeemaker, or Earth. A closed system exchanges energy, but not matter, with its environment; like a computer or the project Biosphere 2. An isolated system exchanges neither matter nor energy with its environment. A theoretical example of such system ...

The cardiac cycle may be divided into phases in any number of methods, for instance four phases [1,3] or seven phases [2]. In the four phases method, the opening and closing of the heart valves explains this method of the cardiac cycle. These phases are [1,3]:. . Phase I: Filling period—the inlet valve is opened to fill the ventricle and the outlet valve is closed.
