Motoring the Future: VW and Toyota Vying for Pole Position deals with the challenges facing the global car industry today, analyzing Volkswagen and Toyota, with some surprising results. The book provides insights into each car manufacturer's corporate culture, products, production, leadership and technologies, as well as some thoughts on the future of the car. These two opponents vying for pole position could hardly be more different: Toyota, with a focus on manufacturing excellence, is dominant in its home market, the USA and south-east Asia, whereas VW, with its strategy of product excellence, leads in western Europe, Brazil and China. Industrial dominance will be important to them in the future, with both companies needing to master the next steps in product and manufacturing excellence. The race is by no means over, offering a deep insight into the challenges for carmakers moving away from fossil fueled combustion to alternative energy vehicles for the mass market. Major players are

trying to answer the key question: How will the car of the future look? VW and Toyota now need to keep ambitious competitors at bay. Timing is everything: US manufacturers are focused on their own revival; Korean and Chinese players are progressing surprisingly fast. However, it looks like the battle for pole position will likely remain between Toyota and VW. Motoring the Future offers updates on Volkswagen's and Toyota's next generation vehicles, both plotting a new course into the future. In this thoroughly revised edition the book, new facts and material have extended the scope to American manufacturers and to new competitors from the Far East.

Aerodynamics has never been more central to the development of cars, commercial vehicles, motorbikes, trains and human powered vehicles, driven by the need for efficiency: reducing carbon dioxide emissions, reducing fuel consumption, increasing range and alleviating problems associated with traffic congestion. Reducing vehicle weight makes it more challenging to ensure that they are stable and handle well over a wide range of environmental conditions. Lighter structures are also more vulnerable to aerodynamically induced vibration. Alongside this, customers demand an environment that is quiet, comfortable and maintains their vision of the world around them in all weathers. These aims must be met by designing vehicles that engage customers emotionally, promoting the brand values of manufacturers and operators. This can only be done by collaboration between designers and aerodynamicists. Examine the latest developments in vehicle aerodynamic development Explore opportunities to network and share experiences around different areas Focus on future challenges and the engineering knowledge and technology required to resolve them Discuss other areas of development including handling and stability, tyre aerodynamics and modelling, aeroacoustics and fluid structure interaction

Edited by Stephanie Schwerter and Jennifer K. Dick, *Transmissibility and Cultural Transfer: Dimensions of Translation in the Humanities* brings together monumental voices in the social sciences—such as Jean-René Ladmiral from Paris and Peter Caws from Washington DC—to begin to address the Humanities’ specific issues with and debt to translation. Calling for a re-examination of how translations are read, critiqued, and taught in Philosophy, History, Political Science, and Sociology departments, this book provides tools for reflection, bases for reconsideration of given translations, and historical observations on how thought has been shaped across national borders. The volume ends with four case studies—examples from auto-translation in postcolonial literature, cultural issues of translation in Chinese-language cinema, negotiating meaning between linguistically and culturally different audiences in the United States and Lebanon, to verbal-visual questions of translation in marketing to German and French clients. All in all, this book is a comprehensive, compact survey of the cultural and linguistic translation and transmission issues in the social sciences today. *Transmissibility and Cultural Transfer: Dimensions of Translation in the Humanities* is illuminating and informative.

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. This book explores the part that electric vehicles can play in reducing carbon dioxide emissions. Further, it explains the impact of public support, technological advances, lower costs and better battery performance in making electric vehicles a viable alternative. The book begins by analyzing the international context of electric vehicles and how they are being developed in different countries, and by offering a forecast of the electricity demand they may create. It then discusses technological innovations in electric vehicle recharging systems. The book is concerned not only with the economic potential of electric vehicles, but also with environmental aspects; consequently, it examines the raw materials supply chain and performs a lifecycle assessment. The book concludes with a chapter on alternative energies in transport, which may also help to facilitate the energy transition. Given its scope, the book offers a valuable resource for researchers, graduate students, policymakers and industry professionals interested in the energy transition and transport.
